

MISSION

CSforALL's mission is to make high-quality computer science an integral part of the educational experience of all K-12 students and teachers and to support student pathways to college and career success.

VISION

CSforALL embodies a vision in which our educational systems provide equitable and accessible K-12 computer science education so that all students will be informed citizens who critically engage in a modern, technology-driven world; develop as learners, users, and creators of computational knowledge and artifacts; better understand the role of computing in the world around them; and learn, perform, and express themselves with computing across other subjects and interests.

STRATEGY

CSforALL activates K-12 computer science in local communities, works with the field to strengthen implementation and reduce inequity, and increases participation and collaboration in the national K-12 computer science movement.

PRIORITIES & WORK

Support Local Change
We build the capacity of school districts and others to deliver CS to all students.

Increase Rigor and Equity
We help the CS education community improve their ability to serve all students.

Grow the Movement
We expand participation in and support for CSforALL nationally.
